Education

University of California, Berkeley

B.S. Electrical Engineering and Computer Science

08/2016 - 05/2020

GPA: 3.83 (Major) • 3.78 (Cum.)

Coursework: Error Correcting Codes[†], Optimization, Probability and Random Processes, Digital Signal Processing, Signals and Systems, Operating Systems, Computer Architecture, Algorithms, Data Structures, Discrete Math, Multivariable Calculus, Linear Algebra

In Progress: Machine Learning, Quantum Mechanics

[†]Graduate-level course

Experience

Undergraduate Research Assistant • Berkeley Laboratory for Information Systems and Sciences

01/2019 - Present

- Studying the use of codes in massive-scale distributed linear algebra algorithms under Professor Kannan Ramchandran.
- Proved bounds on and tested performance of straggler mitigation codes for distributed matrix multiplication on Amazon EC2.

Signal Processing and Laser Systems Intern • Lawrence Livermore National Laboratory

05/2019 - 08/2019

- Developed new algorithm for deconvolving clipped data; demonstrated a 5x lower mean squared error compared to the existing method on a full offline replica of a laser diagnostic. New algorithm saved \$2 million per year in impulse response acquisitions.
- Implemented and shipped Matlab tool to internal diagnostic system for software-based measurement calibration.

Signal Processing and Laser Systems Intern • Lawrence Livermore National Laboratory

05/2018 - 08/2018

- Implemented Monte Carlo simulation in Matlab to quantify previously unknown laser diagnostic error bars.
- Developed improvements to existing deconvolution algorithm; demonstrated a 2x reduction in percent error on laser measurements.
- Presented work at SPIE Photonics West 2019 with first author publication in conference proceedings.

Teaching

EE 120 (Signals and Systems) Teaching Assistant • UC Berkeley EECS Department

08/2018 - Present

Taught weekly 30-40 student sections each semester on class topics: LTI system theory, signal processing, and applications.

Fall 2019 Semester (Head TA)

- Managed a class of 125 students and a 6 person staff, coordinating logistics with the instructor, Professor Murat Arcak.
- Spent 30+ hours adding new content to Python labs, including acoustic echo cancellation and touch-free heart rate monitoring.

Spring 2019 Semester (Head TA)

- Managed a class of 131 students and a 5 person staff, coordinating logistics with the instructor, Professor Babak Ayazifar.
- Spent 100+ hours creating five new applications-based iPython notebook labs for students: applications of LTI filters, the fast Fourier transform, 1D and 2D deconvolution, orthogonal signaling and signal noise models, and PID control of an inverted pendulum.
- Led effort to create a total of 13 worksheets each with 3-4 practice problems for weekly TA-led discussion sections.

EE 16A Head Coordinator and Mentor • Computer Science Mentors

01/2018 - 05/2019

- Recruited, interviewed and selected 25 new EE 16A mentors from 80+ student applicant pool.
- Managed a cohort of 33 mentors, running weekly meetings to discuss club matters and organizing group social events.
- Served as a voting member of the 24-person executive board to guide the direction of the 400+ student club.
- Taught weekly 6-student sections on EE 16A topics: linear algebra, design and circuit analysis, supervised machine learning.

Publications

Dominic Carrano, Ryan Muir. *Deconvolution uncertainty for power sensors at the National Ignition Facility*. Proc. SPIE 10898, High Power Lasers for Fusion Research V, 108980Q (4 March 2019); doi: 10.1117/12.2511521; <https://doi.org/10.1117/12.2511521>.

Presented at SPIE LASE High Power Lasers For Fusion Research V (February 2019).

Skills and Tools

Proficient: Python, numpy, scipy, matplotlib, iPython Notebook, Matlab

Familiar: Unix/Linux, LaTeX, Java, C, HTML, Git, GitHub, Eclipse, IntelliJ, Markdown
